DETAILED ACTION

1. Newly-submitted Figure 3 has been accepted.

Election/Restrictions

2. Newly submitted claims 9 and 10 directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: Claims 1-6 are classifiable in class 264, subclass 205. Claims 9 and 10 are classifiable in class 428, subclass 364. The product (fiber) of claims 9 and 10 can be made by another and materially different process such as a process including the steps of making (e.g., by extrusion) a film and then longitudinally slitting the film to make fibers.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 9 and 10 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at

Art Unit: 1732

the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Oxenrider et al (U.S. Patent 3,899,563 A) in combination with Frey et al (Fibres by Dry Spinning Processes") for the reasons of record.

Response to Arguments

5. Applicant's arguments filed on 27 October 2005 have been fully considered but they are not persuasive.

6. Applicant argues (pages 9 and 10) that a solution agent, and a solution spinning process, results in a fiber having a higher repellency than a fiber made from a melt. Examiner responds that there is no claim language or evidence in the originally-filed specification of any such alleged improvement.

7. Applicant argues (page 11) that the combination of refernces does not teach or suggest the presently-claimed invention. Examiner responds that Oxenrider et al teach the use of polyacrylonitrile polymer (col. 1, lines 10 and 11) and that the fiber may be prepared by methods known in the art (col. 9, lines 33-37), and one such method for preparing fibers from polyacrylonitrile polymer is solution (or dry) spinning as taught by Frey et al.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
